About: 2023 IEEE CIS Summer School on Computational Advances in Deep Learning and Applications (CADLA) was a one week short-term course organized by Computer Vision and Biometrics Lab (CVBL) at Indian Institute of Information Technology, Allahabad, Prayagraj during 17-21 July 2023. The summer school has been organized in completely physical mode.

Breakthroughs in the field of data science and computing power over the past two decades has made computational intelligence and deep learning the most powerful tools in the field of artificial intelligence. Deep learning algorithms have shown promising success in numerous applications of Computer Vision, Natural Language Processing, Robotics and Automation. Present day state-of-the-art algorithms have amazed everyone with their human level performance in classification, generating life-like images and videos, automated conversations and even beating world-champions at their own games. As the quest continues, deep learning has emerged out to be the most sought after skill in today's industrial scenario, right from the Tech Giants to Startups. This summer school aims to give the participants hands-on experience, right from the foundations, from some of the leading experts in the fields in the areas of computational intelligence, advances in deep architectures and applications using different modality of data.

Objectives: The objectives of the summer school are highlighted as follows,

- Building awareness towards computational advances in deep learning architectures.
- Building communities of research students, educators, R&D and Industry persons in the trending areas of computational intelligence and deep learning.
- Providing tutorial and hands-on demo sessions, where the participants can experiment with concepts and methods.
- Building the technical capacity in the area of computational intelligence via deep architectures.
- Facilitating the learning of participants through the internationally renowned experts in the domain.
